Ann-Mari De Beer

Data Engineer & Database Administrator

Cape Town / Stellenbosch · annmaridebeer@gmail.com · linkedin.com/in/ann-mari-de-beer

PROFILE

Data Engineer and Database Administrator with 10 months of production experience in a consultancy's Data & Analytics unit, supporting SQL Server environments for five managed-service clients: health monitoring, Availability Groups and disaster recovery, patching, security and access management, SSIS/ETL support, and SSRS, Power BI and Power Platform delivery. Bachelor of Computing (Data Science & Business Intelligence) and Microsoft Certified: Azure Data Fundamentals (DP-900). Passionate about Business Intelligence and Power BI dashboards.

CORE SKILLS

- **SQL Server:** administration, Always On Availability Groups, backup & recovery, patching, SQL Agent, ERRORLOG analysis
- **Monitoring & support:** Redgate SQL Monitor, SSRS, Azure DevOps, incident diagnosis
- **ETL & automation:** SSIS, SQL Agent jobs, PowerShell, error handling & logging
- **Security & governance:** logins, permissions, service accounts, ownership reviews
- **BI & Power Platform:** Power BI, DAX, RLS, Microsoft Fabric, Power Apps, Power Automate, SharePoint
- **Health assessments:** upgrade, storage, backup and security reviews, client reporting
- **Programming:** Python (Pandas, NumPy), SQL, C#, Java; scikit-learn
- **Languages:** English and Afrikaans (fluent)

WORK EXPERIENCE

Database Administrator & Data Engineer, Data & Analytics

Jan 2026 – Present

First Technology Digital · Managed services · Cape Town (hybrid)

SQL Server Administration & Support

- Main point of contact for a client's SQL Server support SLA and for weekly monitoring and reporting for two further clients, running daily health checks across Availability Group, production, test and development servers
- Resolved Availability Group synchronisation failures and escalated storage constraints; restored production databases to test; corrected backup maintenance plans after backup failures
- Applied cumulative updates to 13 instances and ran after-hours maintenance (indexes, transaction-log shrinks) under change control

Security & Governance

- Led a SQL Agent job and database ownership review and began moving named-account jobs to service accounts under change control
- Investigated login and authentication issues; produced login and user lists and disabled accounts no longer needed

Monitoring, Reporting & Health Assessments

- Rebuilt a failing Daily Availability Group report with a PowerShell collector and central health table, and turned a Morning Checks report into a six-area Daily Server Report with colour-coded health
- Produced weekly monitoring packs (key-issue email, PDF report with severity matrix, Excel workbook) and presented monthly client health and improvement reviews
- Delivered a client-facing SQL Server health assessment across development, test and production: configuration, backup and recovery, storage, security and unsupported-version risks, with executive summary and remediation plan

Data Engineering & ETL

- Took over a client's data-operations account: reconstructed an undocumented SSIS environment, resolved production incidents, ran the month-end payment cycle and added error handling and logging to SQL jobs
- Restored Power BI reports that had stopped refreshing (including a rebuilt semantic model) and fixed SSRS report and data errors

Power BI, Fabric & Power Platform

- Sole developer of the internal Goals & Growth platform end to end: Microsoft Forms, SharePoint, Power Automate, Power Apps and a Power BI report with DAX scoring and row-level security

- Built a three-page Sales Analytics Power BI dashboard used as an internal client demonstration; built a Fabric medallion architecture and supported a Power BI to Fabric migration

CERTIFICATION & EDUCATION

- **Microsoft Certified: Azure Data Fundamentals (DP-900)** · January 2026
- **Bachelor of Computing, Data Science & Business Intelligence** · Belgium Campus iTversity · NQF 7; honours (NQF 8) in progress
- **National Senior Certificate** · Glenwood College High School

UNIVERSITY PROJECTS

- **International Hyacinth Team Project:** data-driven website combining historical data, machine learning and environmental monitoring to forecast water hyacinth growth at Hartbeespoort Dam
- **Machine learning and database projects:** Python data cleaning and analysis, scikit-learn models, relational SQL databases and Power BI dashboards

Hybrid or remote preferred, but not limited to. Driver's licence: Yes.
